

bproauto® *metal-to-plastic ball joints*

More wear resistance and corrosion protection

bproauto® metal-to-plastic ball joints are a high-quality, cost-saving part alternative that covers most makes and models. They're precision machined to ensure accuracy, smooth finish, low friction and more wear resistance. Plus, bproauto metal-to-plastic ball joints are backed by up to a 2-year warranty* so you can recommend them to your customers and install them with confidence.

Durable coating provides excellent corrosion protection

Ideal for light to medium vehicles

- **High-quality alloy structural steel** — undergoes heat treatment for improved mechanical performance

- **Larger ball stud** — withstands greater loads

- **Thickened flanges** — enable faster, more stable disassembly

- **High-strength nut** — ensures firm installation, anti-loosening and reliable performance

- **Dust boot** — made of high-performance neoprene rubber, uses a multi-seal design tested to prevent contaminants in low-temperature environments

- **Ball bowl** — made with DuPont material, is wear-resistant and self-lubricating

This kit contains complete accessories required for installation and can be quickly disassembled.

Partner with bproauto parts to provide your customers with maximum performance and a better driving experience.
